	Acquisition
	Demonstration/Pilot Project

Project Description

The proposed project would restore the existing boat ramp at Star Bend by dredging out approximately			
1,800 cubic yards of material that is currently impeding boat traffic. Removed material will be decanted, spread out over adjacent fields, and seeded with native vegetation.			

Write a narrative briefly describing the project components and/or characteristics (maximum of 300 words).

I. Project Rationale/Issues Statement

Briefly describe the need for the project and the desired outcomes/deliverables (maximum of 200 words).

The heavy winter storms of 2017 filled in the Star Bend boat ramp with sediment and debris. The boat ramp is now inaccessible for many boats. A bathymetric survey shows that the County needs to remove nearly 1,800 cubic yards of material.
